## Take climate action by supporting green projects

Calculate your CO<sub>2</sub> emissions

This platform features UNFCCC-certified projects that reduce, avoid or remove from the atmosphere greenhouse gas emissions. The projects are implemented in developing countries and are rewarded with Certified Emission Reductions (CERs), a type of carbon offset measured in tonnes of CO<sub>2</sub> equivalent. The CERs are available for everyone to purchase to offset emissions or in support for the projects. The full contributions go directly to the project owners.
